AC 11/05/2017
Item No. 4.183

UNIVERSITY OF MUMBAI

Revised syllabus (Rev- 2016) from Academic Year 2016 -17
Under

FACULTY OF TECHNOLOGY

Electrical Engineering

Second Year with Effect from **AY 2017-18**
Third Year with Effect from **AY 2018-19**
Final Year with Effect from **AY 2019-20**

As per **Choice Based Credit and Grading System**
with effect from the AY 2016–17

From Co-coordinator's Desk:

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated, and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai, has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEO's) and give freedom to affiliated Institutes to add few (PEO's), course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of Studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, **Choice Based Credit and Grading System** is also introduced to ensure quality of engineering education.

Choice Based Credit and Grading System enable a much-required shift in focus from teacher-centric to learner-centric education. Since the workload estimated is based on the investment of time in learning, not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes. Faculty of Technology has devised a transparent credit assignment policy adopted ten points scale to grade learner's performance. **Choice Based Credit and Grading System** were implemented for First Year of Engineering (Undergraduate) from the academic year 2016-2017. Subsequently this system will be carried forward for Second Year of Engineering (Undergraduate) in the academic year 2017-2018 and so on.

Dr. Suresh K. Ukarande
Coordinator,
Faculty of Technology,
Member - Academic Council
University of Mumbai, Mumbai

Preamble:

The overall technical education in our country is changing rapidly in manifolds. Now it is very much challenging to maintain the quality of education with its rate of expansion. To meet present requirement a systematic approach is necessary to build the strong technical base with the quality. Accreditation will provide the quality assurance in higher education and to achieve recognition of the institution or program meeting certain specified standards. The main-focus of an accreditation process is to measure the program outcomes, essentially a range of skills and knowledge that a student will have at the time of graduation from the program that is being accredited. Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

I, as a Chairman, Board of Studies in Electrical Engineering of University of Mumbai, happy to state here that, Program Educational Objectives (PEOs) were finalized for undergraduate program in Electrical Engineering, more than ten senior faculty members from the different institutes affiliated to University of Mumbai were actively participated in this process. Few PEOs and POs of undergraduate program in Electrical Engineering are listed below;

Program Educational Objectives (PEOs)

- *Graduates will have successful career in industry or pursue higher studies to meet future challenges of technological development.*
- *Graduates will develop analytical and logical skills that enable them to analyze and design Electrical Systems and their Controls.*
- *Graduates will achieve professional skills to expose themselves by giving an opportunity as an individual as well as team.*
- *Graduates will undertake research activities in emerging multidisciplinary fields.*

Program Outcomes (POs)

- **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

- **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Dr. S. R. Deore,
Chairman,
Board of Studies in Electrical Engineering,
Member - Academic Council
University of Mumbai

Course Objectives	• To Develop knowledge and skill based foundation in Mathematics amongst students needed for the field of Electrical Engineering • To provide students with mathematics fundamentals necessary to formulate, solve and analyses complex engineering problems. • To prepare student to apply reasoning informed by the contextual knowledge to Electrical Engineering practice. • To prepare students to work as part of teams on multi-disciplinary projects.
Course Outcomes	Students will be able • To demonstrate basic knowledge of Laplace Transform, Fourier series, Bessel Functions, Vector Algebra and Complex Variable. • To identify and Model the problems of the field of Electrical Engineering and solve it.

Module	Contents	Hours
1	**Laplace Transform** **Laplace Transform (LT) of Standard Functions:** Definition of Laplace transform, Condition of Existence of Laplace transform, Laplace transform of $e^{at}, Sin(at), \cos(at), \sinh(at), \cosh(at), t^n$ Heaviside unit step function, Dirac-delta function, Laplace transform of Periodic function **Properties of Laplace Transform:** Linearity, first shifting theorem, second shifting theorem, multiplication by t^n ,Division by *t*, Laplace Transform of derivatives and integrals, change of scale, convolution theorem, Evaluation of integrals using Laplace transform.	07
2	**Inverse Laplace Transform & its Applications:** Partial fraction method, Method of convolution, Laplace inverse by derivative. **Applications of Laplace Transform:** Solution of ordinary differential equations, Solving RLC circuit differential equation of	06

	first order and second order with boundary condition using Laplace transform (framing of differential equation is not included).	
3	**Fourier Series:** **Introduction:** Orthogonal and orthonormal set of functions, Introduction of Dirichlet's conditions, Euler's formulae. **Fourier Series of Functions:** Exponential, trigonometric functions of any period =2L, even and odd functions, half range sine and cosine series Complex form of Fourier series, Fourier integral representation, Fourier Transform and Inverse Fourier transform of constant and exponential function.	11
4	**Vector Algebra & Vector Differentiation:** **Review of Scalar and Vector Product**: Scalar and vector product of three and four vectors, Vector differentiation, Gradient of scalar point function, Divergence and Curl of vector point function. **Properties:** Solenoidal and irrotational vector fields, conservative vector field.	07
5	**Vector Integral** Line integral, Green's theorem in a plane, Gauss' divergence theorem and Stokes' theorem	06
6	**Complex Variable & Bessel Functions:** **Analytic Function:** Necessary and sufficient conditions (No Proof), Cauchy Reiman equation Cartesian form (No Proof) Cauchy Reiman Equation in polar form (with Proof), Milne Thomson Method and it application, Harmonic function, orthogonal trajectories. **Mapping:** Conformal mapping, Bilinear transformations, cross ratio, fixed points **Bessel Functions:** Bessel's differential equation, Properties of Bessel function of order +1/2 and -1/2, Generating function, expression of $\cos(x\sin\theta)$, $\sin(x\sin\theta)$ in term of Bessel functions	11

Assessment:
Internal Assessment consists of two tests out of which; one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project

Term work:
Term work shall consist of minimum eight tutorials and assignments (minimum 2).
The distribution of marks for term work shall be as follows:

Tutorials	:15 marks
Assignments	:05 marks
Attendance (Theory and Tutorial)	:05 marks

The final certification and acceptance of term work ensures minimum passing in the term work.

Theory Examination:
1. Question paper will comprise of 6 questions, each carrying 20 marks.
2. Total four questions need to be solved.
3: Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 5 marks will be asked.
4: Remaining question will be randomly selected from all the modules.

Course Objectives	• To teach the basic concept of various electronic devices, circuits and their application • To develop ability among students for problem formulation, system design and solving skills
Course Outcomes	Students will be able • To Identify the different types of diodes and their applications in electronic circuits • To analyze the dc and ac parameters of BJT JFET, and differential amplifiers • To demonstrate and analyze the effects of various parameters on performance of BJT and JFET amplifier. • To analyze the effects of negative feedback in BJT and JFET amplifiers. • To identify the effects of cascading in BJT and JFET amplifiers. • To analyze the different types of oscillators.

Module	Contents	Hours
1	**Diode:** Basic construction, Operation and characteristics of diode, Application of diode as clipper and clampers, Construction, Principle of operation and application of special diode – 1) Zener, 2) LED, 3) Schottky, 4) Photodoide. Full Wave Bridge Rectifier with and without Filter, Analysis: specification of the devices and components required for C, LC, CLC filter.	08
2	**Bipolar Junction Transistor:** Construction and Characteristics of various configurations of	14

	BJT. Biasing Circuits: Types, dc circuit analysis, load line, thermal runaway, stability factor analysis, thermal stabilization and Compensation. Modeling: Small signal analysis of CE configurations with different biasing network using h-parameter model. Introduction to re-model and hybrid-pi model. Amplification derivation of expression for voltage gain, current gain, input impedance and output impedance of CC, CE amplifiers, Study of frequency response of BJT amplifier.	
3	**Field Effect Transistor:** Types, construction and their characteristics, Biasing circuits for FET amplifiers, FET small signal analysis, derivation of expressions for voltage gain and output impedance of CS amplifiers. MOSFET- Types, construction and their characteristics	08
4	**Feedback Amplifier:** Introduction to positive and negative feedback, negative feedback -current, voltage, Series and Shunt type. It's effect on input impedance, output impedance, voltage gain, current gain and bandwidth	07
5	**Cascade amplifiers:** Types of coupling, effect of coupling on performance of BJT and JFET amplifiers, Darlington-pair	03
6	**Oscillators:** Positive feedback oscillators, frequency of oscillation and condition for sustained oscillations of a) RC phase shift, b)Wien bridge, c)Hartley/ Colpitts with derivations, crystal Oscillator, UJT relaxation oscillator	08

EEC303	Conventional and Non-conventional Power Generation	20	20	20	80	03	25	125

Course Objectives	• To impart the knowledge of basics of different types of power generation & power plants in detail so that it helps them in industry oriented learning
Course outcomes	Students will be able • To analyse the economics of power generation • To illustrate, the operation of thermal power plant • To describe, the classification of hydro power plant and significance of hydrograph • To illustrate, the operation of nuclear power plant • To compare the operation of Diesel and Gas Turbine power plant. • To illustrate operation of various Non-Conventional Energy sources

Module	Contents	Hours
1	**Conventional and Non- Conventional sources of energy** Present energy scenario worldwide and Indian perspective. **Economics of the power plant** Load curve, load duration curve, various factors and effects of fluctuating load on operation and methods of meeting fluctuating load. Selection of generating equipment, depreciation of plant, cost of electrical energy-Fixed and operating cost of different plants, effect of load factor on unit cost. Role of load diversity in power system economy and basic tariff methods **(*Numerical).**	05

2	**Thermal power plant** Law of Thermodynamics. Analysis of steam cycle-Carnot, Rankine. PV and TS diagram, Reheat cycle and Regenerative cycle. Layout of power plant. Selection of site, Lay out of Coal handling Plant, pulverized coal handling, Fluidized bed combustion, Ash handling, Dust collection, Forced draught and induced draught fans, Water tube Boiler and Fire tube boiler. Impulse turbine and reaction turbine. Accessories: Feed pump, injector, economizer, air preheater, super heater, steam separator, Direct contact condensers and Surface condenser, and cooling towers.	09
3	**Hydro power plant** Rainfall, run off and its measurement hydrograph, flow duration curve, mass curve, reservoir storage capacity, layout of hydroelectric power plant, Selection of site, classification of hydro power plant, construction and working of turbine-Pelton, Kaplan, Francis. **(*Numerical)**	05
4	**Nuclear power plant** Introduction of nuclear engineering, fission, fusion, nuclear materials, thermal fission reactor, layout of nuclear power plant, Selection of site, PWR, BWR, reactor control, introduction to liquid metal, fast breeder reactors and plasma technology.	06
5	**Gas turbine and Diesel power plant** Brayton cycle operation, Layout of gas turbine power plant, types of gas turbine power plant. Diesel cycle, Principle of Diesel power plant, layout, significance of components of diesel power plant. Comparison with gas turbine power plants in terms of advantages and disadvantages	04
6	**Power Generation using non-conventional energy sources** **Solar Energy** Solar Flat plate collectors, Solar concentrators, Dish and Parabolic trough concentrating generating systems, Central tower solar thermal power plants. Basic principle of power generation in a PV cell, Band gap and efficiency of PV cells solar cell characteristics. **Wind Energy** Basic component of WEC, Types of wind turbine-HAWT, VAWT, Performance parameters of wind turbine, Power in wind, Wind electric generators and site selection. **Fuel Cell** Introduction to fuel cell, principle of operation of fuel cell, Types of fuel cell **Other sources** Basics of power generation: Biomass, geothermal and tidal energy sources and OTEC.	07

Note: *Numerical should be covered in tutorials.

Course Objectives	• Students should understand the concepts of DC machines, Reluctance motor, Stepper motors and their applications. • To impart industry oriented learning.
Course Outcomes	Students will be able • To analyze series parallel magnetic circuits to determine circuit parameters and losses. • To illustrate principle of energy conversion in single and double excited machines. • To understand the performance parameters of dc machines. • To analyze the effect of performance parameters and application of dc motors. • To analyze the performance of dc machines by conducting various test. • To illustrate the principle of operation and applications of stepper motors.

Module	Contents	Hours
1	**Basics of Magnetism** Magnetic field, Magnetic circuit, Numerical from series parallel magnetic circuit, Flux linkage, Inductance and energy, Faraday's laws, Hysteresis and eddy current losses.	04
2	**Electromechanical Energy Conversion** Principle, Energy stored in magnetic field, Torque in singly excited magnetic field, Reluctance motor, Doubly excited magnetic field, Torque from energy and Co- energy. Dynamic equations	08
3	**DC Machines** Construction of machine, Basic design concept of lap and wave winding, Principle of operation, Significance of commutator and	10

	brushes, EMF and torque equation, concept of back EMF, Armature reaction, Methods to minimize the effect of Armature reaction, Process of commutation, Methods to improve commutation.	
4	**DC Motor** Characteristics of DC Motors, speed-torque characteristic equations (Drives approach), Electrical braking (Rheostatic, regenerative and plugging with numerical and speed-torque characteristic equation), Necessity of starter, concept of soft starting, Block diagram of soft starter, Speed control of DC shunt and series motor, losses and efficiency, Applications of DC motor.	14
5	**Testing of DC Motor** Retardation, Brake load, Swinburne, Hopkinson's and field test.	06
6	**Stepper Motor** Working principle, construction of stepper motor, Classification, Variable reluctance stepper motor (VRSM), Permanent magnet stepper motor, Characteristics of stepper motor (Static and dynamic characteristic) Applications of stepper motor. **(No Numerical)**	06

Books Recommended:

Text Books:

1. Bimbhra P. S., *Electric Machinery* , Khanna Publisher,
2. Bimbhra P. S., *Generalized Machine Theory*, Khanna Publisher,
3. E. G. Janardanan, *Special Electrical Machines,* PHI
4. S. K. Pillai, *A first course on Electrical Drives,* New age publication
5. V. K. Mehta, *Principles of Electrical Machines,* S Chand Publication
6. G. K. Dubey, *Fundamentals of Electrical Drives*, Narosa Publication

Reference Books:

1. M. G. Say and E. O. Taylor, *Direct current machines*, Pitman publication
2. Ashfaq Husain, *Electric Machines*, Dhanpat Rai and co. publications
3. M. V. Deshpande, *Electric Machines*, PHI
4. Vedam Subramanyam, *Electrical Drive-concept and applications*, TMH Publication
5. A. E. Fitzgerald, Kingsly, Stephen., *Electric Machinery*, Tata McGraw Hill
6. K. Venkatratnam, *Special Electrical Machines,*

Assessment:

Internal Assessment consists of two tests out of which; one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project

Theory Examination:

1. Question paper will comprise of 6 questions, each carrying 20 marks.
2. Total four questions need to be solved.
3: Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 5 marks will be asked.
4: Remaining question will be randomly selected from all the modules.

University of Mumbai						
Course Code	**Course Name**	**Teaching Scheme (Contact Hours)**		**Credits Assigned**		
		Theory	**Practical**	**Theory**	**Practical**	**Total**
EEL301	**Electrical and Electronics Measurement Lab (abbreviated EEM Lab)**	**-**	**2**	**-**	**1**	**1**

Course Code	Course Name	Examination Scheme							Total
		Theory				Practical			
		Internal Assessment			End Sem. Exam	Term Work	Pract. and Oral	Oral	
		Test 1	Test 2	Avg					
EEL301	Electrical Network and Measurement Lab	-	-	-	-	25	-	25	50

Course Objectives	• Students should be able to understand working principles of various analog and digital instruments & devices used for measurement of the various electrical parameters. • To understand the measurement of physical parameters using sensors.
Course Outcomes	Students will be able • To illustrate the working principle of bridges • To do measurement of various electrical circuit parameters. • To calibrate various electrical measuring instruments. • To illustrate the concept of extension of range of meters used in electrical measurements. • To do the measurement of various process parameters. • To illustrate the working principle of sensors

Syllabus: Same as that of Course EEC304 Electrical and Electronics Measurement

Suggested List of Laboratory Experiments:

1. Measurement of the medium resistance using Wheatstone Bridge.
2. Measurement of the low resistance using Kelvin's Double Bridge.
3. Measurement of inductance using Maxwell's Bridge.
4. Measurement of inductance using Hay's Bridge.
5. Measurement of inductance using Anderson's Bridge.
6. Measurement of capacitance using Desauty's bridge.

7. Measurement of capacitance using Schering's bridge.
8. Calibration of Crompton DC Potentiometer.
9. Calibration of Ammeter/Voltmeter/Wattmeter using Potentiometer.
10. To measure output voltage and displacement using LVDT and draw graph to verify the characteristics of output voltage Vs Displacement.
11. Measurement of temperature using RTD.
12. To Study various Thermocouples and Estimate their Response times.
13. Calibration of single phase energy meter by direct loading.
14. To measure output voltage and force using strain gauge and draw graph to verify the characteristics of force Vs Output voltage.

Any other experiment based on syllabus which will help students to understand topic/concept.

Term Work:

Term work shall consist of minimum 8 experiments. The distribution of marks for term work shall be as follows:

Experiments Performance	:10 Marks
Journal	:10 Marks
Attendance (Theory and Practical)	:05 Marks

The final certification and acceptance of term work ensures the minimum passing in the term work.

Oral Examination:

Oral examination will be based on entire syllabus.

University of Mumbai						
Course Code	**Course Name**	**Teaching Scheme (Contact Hours)**		**Credits Assigned**		
		Theory	**Practical**	**Theory**	**Practical**	**Total**
EEL302	**Object Oriented Programming and Methodology Lab (abbreviated OOPM Lab)**	**-**	**4#**	**-**	**2**	**2**

Course Code	Course Name	Examination Scheme							Total
		Theory				Practical			
		Internal Assessment			End Sem. Exam	Term Work	Pract. and Oral	Oral	
		Test 1	Test 2	Avg					
EEL302	Object Oriented Programming and Methodology Lab	-	-	-	-	25	50	-	75

Course Objectives	• To learn the object oriented programming concepts • To study various java programming constructs like multithreading, exception handling, packages etc. • To explain components of GUI based programming.
Course Outcomes	Students will be able • To apply fundamental programming constructs. • To illustrate the concept of packages, classes and objects. • To elaborate the concept of strings, arrays and vectors. • To implement the concept of inheritance and interfaces. • To implement the notion of exception handling and multithreading. • To develop GUI based application.

- **Prerequisite:** Structured Programming Approach

Module	Content	Hours
1	**OO Concepts:** Object, Class, Encapsulation, Abstraction, Inheritance, Polymorphism. **Features of Java, JVM** **Basic Constructs/Notions:** Constants, variables and data types, Operators and Expressions, Revision of Branching looping	02
2	**Classes, Object and Packages** Class, Object, Method.	05

	Constructor, Static members and methods Passing and returning Objects Method Overloading Packages in java, creating user defined packages, access specifiers.	
3	**Array, String and Vector** Arrays, Strings, String Buffer Wrapper classes, Vector	04
4	**Inheritance and Interface** Types of Inheritance, super keyword, Method Overriding, abstract class and abstract method, final keyword, Implementing interfaces, extending interfaces	03
5	**Exception Handling and Multithreading** Error vs Exception, try, catch, finally, throw, throws, creating own exception Thread lifecycle, Thread class methods, creating threads, Synchronization	04
6	**GUI programming in JAVA** **Applet:** Applet life cycle, Creating applets, Graphics class methods, Font and Color class, parameter passing. **Event Handling:** Event classes and event listener **Introduction to AWT:** Working with windows, Using AWT controls- push Buttons, Label, Text Fields, Text Area, Check Box, and Radio Buttons.	06

Suggested List of Programming Assignments / Laboratory Work:

1. Program on various ways to accept data through keyboard and unsigned right shift operator.
2. Program on branching, looping, labelled break and labelled continue.
3. Program to create class with members and methods, accept and display details for single object.
4. Program on constructor and constructor overloading
5. Program on method overloading
6. Program on passing object as argument and returning object
7. Program on creating user defined package
8. Program on 1D array
9. Program on 2D array
10. Program on String
11. Program on StringBuffer
12. Program on Vector
13. Program on single and multilevel inheritance (Use super keyword)
14. Program on abstract class
15. Program on interface demonstrating concept of multiple inheritance
16. Program on dynamic method dispatch using base class and interface reference.
17. Program to demonstrate try, catch, throw, throws and finally.
18. Program to demonstrate user defined exception

19. Program on multithreading
20. Program on concept of synchronization
21. Program on Applet to demonstrate Graphics, Font and Color class.
22. Program on passing parameters to applets
23. Program to create GUI application without event handling using AWT controls
24. Program to create GUI application with event handling using AWT controls
25. Mini Project based on content of the syllabus. (Group of 2-3 students)

Any other experiment based on syllabus which will help students to understand topic/concept.

Term Work:
Term work shall consist of minimum 16 experiments, assignments (min 2) and class test. The distribution of marks for term work shall be as follows:

Experiments Performance	:10 marks
Assignments	:05 marks
Class Test	:05 marks
Attendance	:05 marks

The final certification and acceptance of term work ensures the minimum passing in the term work.

Practical/Oral Examination:
Practical/Oral examination will be based on entire syllabus.

University of Mumbai						
Course Code	**Course Name**	**Teaching Scheme (Contact Hours)**		**Credits Assigned**		
		Theory	**Practical**	**Theory**	**Practical**	**Total**
EEL303	**Electronics Lab-I (abbreviated EL Lab-I)**	**-**	**2**	**-**	**1**	**1**

Course Code	Course Name	Examination Scheme							Total

		Test 1	Test 2	Avg					
EEL303	Electronics Lab-I	-	-	-	-	25	25	-	50

Course Objectives	• To understand the basic concept of various electronic devices, circuits and their application. • To develop ability among students to design and implement electronic circuits.
Course Outcomes	Student will be able • To identify the different types of semiconductor devices and demonstrate their applications in electronic circuits. • To determine the dc and ac parameters of semiconductor devices and differential amplifiers. • To analyze the performance of different types of rectifier with and without filter. • To plot frequency response of BJT and JFET amplifier. • To analyze effect of feedback on the performance of amplifier. • To analyze the performance of different type of oscillators

Syllabus: Same as that of Course EEC302 Electronic Devices and Circuits

Suggested List of Laboratory Experiments:

1. Study of V-I characteristics of standard PN junction diode, zener diode, schottkey diode.
2. Use of diode as clipper and clamper
3. Rectifier- Filter performance analysis
4. BJT biasing network stability analysis
5. BJT Input and Output Characteristics for CE/CB/CC configuration
6. Frequency response of BJT CE amplifier
7. Study of JFET characteristics and calculation of parameters
8. Study of MOSFET characteristics and calculation of parameters

9. Frequency response of JFET CS amplifier
10. Study of negative feedback on amplifier performance
11. Study of photo devices applications
12. Study of differential BJT amplifier
13. Study of Darlington pair amplifier
14. Study of a RC phase shift oscillator
15. Study of a Wien Bridge oscillator
16. Study of a Hartley/Colpitts oscillator

Any other experiment based on syllabus which will help students to understand topic/concept.

Term work:

Term work shall consist of minimum 10 experiments. The distribution of marks for term work shall be as follows:

Experiments performance	:10 marks
Journal	:10 marks
Attendance	:05 marks

The final certification and acceptance of term work ensures the minimum passing in the term work.

Practical/Oral Examination:

Practical/Oral examination will be based on entire syllabus.

EEL304	Electrical Machine Lab-I	-	-	-	-	25	25	-	50

Course Objectives	• Students should understand the concepts of DC machines, Reluctance motor, Stepper motors and their applications. • To impart industry oriented learning.
Course Outcomes	Students will be able • To demonstrate different speed control methods of dc motors. • To illustrate and analyze the performance of dc motors.

Syllabus: Same as EEC-305 (Electrical Machines-I)

Suggested List of Laboratory Experiment:

1. Speed control of DC shunt motor.
2. Load test on DC shunt motor.
3. Load test on DC series motor.
4. Load test on DC compound motor.
5. Brake test on DC motor.
6. Open circuit and load characteristic of DC shunt generator.
7. Rheostatic braking of DC motor.
8. Plugging of DC motor.
9. Retardation test of DC motor.
10. Swinburne's test on DC motor.
11. Hopkinson's test on DC motor.
12. Study of Stepper motor drive.
13. Field test

Any other experiment based on syllabus which will help students to understand topic/concept.

Term work:

Term work shall consist of minimum 8 experiments. The distribution of marks for term work shall be as follows:

Experiments performance	:10 marks
Journal	:10 marks

University of Mumbai						
Course Code	**Course Name**	**Teaching Scheme (Contact Hours)**		**Credits Assigned**		
		Theory	**Tutorial**	**Theory**	**Tutorial**	**Total**
EEC401	**Applied Mathematics-IV (abbreviated as AM-IV)**	**4**	**1**	**4**	**1**	**5**

Course code	Course Name	Examination Scheme						
		Theory					Term Work	Total
		Internal Assessment			End Sem. Exam	Exam Duration (Hrs)		
		Test 1	Test 2	Avg				
EEC401	Applied Mathematics-IV	20	20	20	80	3	25	125

Course Objectives	• To develop analytical insight of the student to prepare them for graduates studies in Electrical Engineering. • To enhance their ability to solve and analyze Electrical Engineering problem. • To provide students with a strong mathematical foundation to acquire the professional competence knowledge and skills.
Course Outcomes	Students will be able • To develop the proactive approach towards the selection of methods to a solution of engineering problems. • To identify different probability distribution, learn sampling technique, compute Eigen values and Eigen vectors and evaluate complex integrals and use their application in Electrical Engineering problems.

Pre-requisites:
Basics of Complex numbers, Analytic Function, Matrices, Symmetric, Orthogonal and Unitary matrices, Rank, Normal form, Solution of system of linear equations, L. I. & L. D. vectors, Basics of Probability.

1		**Calculus of Variation:**	**06**
	1.1	Euler's Langrange equation, solution of Euler's Langrange equation (only results for different cases for Function) independent of a variable, independent of another variable, independent of differentiation of a variable and independent of both variables	
	1.2	Isoperimetric problems, several dependent variables	
	1.3	Functions involving higher order derivatives: Rayleigh-Ritz method	
2		**Linear Algebra: Vector Spaces**	**06**
	2.1	Vectors in n-dimensional vector space: properties, dot product, cross product, norm and distance properties in n-dimensional vector space.	
	2.2	Vector spaces over real field, properties of vector spaces over real field, subspaces.	

	2.3	The Cauchy-Schwarz inequality, Orthogonal Subspaces, Gram-Schmidt process.	
3		**Linear Algebra: Matrix Theory**	**10**
	3.1	Characteristic equation, Eigen values and Eigen vectors, properties of Eigen values and Eigen vectors	
	3.2	Cayley-Hamilton theorem (without proof), examples based on verification of Cayley- Hamilton theorem.	
	3.3	Similarity of matrices, Diagonalisation of matrices.	
	3.4	Functions of square matrix, derogatory and non-derogatory matrices.	
4		**Probability**	**10**
	4.1	Baye's Theorem (without proof)	
	4.2	Random variable: Probability distribution for discrete and continuous random variables, Density function and distribution function, expectation, variance.	
	4.3	Moments, Moment Generating Function.	
	4.4	Probability distribution: Binomial distribution, Poisson & normal distribution (For detailed study)	
5		**Correlation**	**04**
	5.1	Karl Pearson's coefficient of correlation, Covariance, Spearman's Rank correlation,	
	5.2	Lines of Regression.	
6		**Complex integration**	**12**
	6.1	Complex Integration: Line Integral, Cauchy's Integral theorem for simply connected regions, Cauchy's Integral formula.	
	6.2	Taylor's and Laurent's Series	
	6.3	Zeros, singularities, poles of f(z), residues, Cauchy's Residue theorem.	
	6.4	Applications of Residue theorem to evaluate real Integrals of different types.

		Internal Assessment			End Sem. Exam	Exam Duration (Hrs)		
		Test 1	Test 2	Avg				
EEC402	Power System-I	20	20	20	80	3	25	125

Course Objectives	• To learn Basic structure of electrical power systems, different component of power system network. • To get knowledge of mechanical and electrical design of transmission systems. • To learn representation of transmission systems for performance evaluation.
Course Outcomes	Students will be able • To illustrate the general structure of power system. • To illustrate purpose of different mechanical components of overhead transmission lines. • To determine transmission line parameters for different configurations. • To analyze the performance of short, medium and Long transmission lines. • To analyze the performance of transmission line for different loading conditions. • To illustrate safety norms and regulations related to underground cables and grounding techniques.

Module	Contents	Hours
1	**Introduction:** Basic structure of power system: generation, transmission and distribution, single line diagram of typical AC supply system, comparison between AC and DC supply system, various system of electric power transmission, choice of economic voltage for transmission, Transmission and Distribution network in India.	02
2	**Mechanical Design of Overhead lines:** Main component of overhead lines, line supports, span, conductor configuration, sag in overhead lines, calculation of sag for equal and unequal supports, effect of ice and wind loading, insulators, type of insulators, potential distribution across insulator string, string	07

	efficiency, methods for improving string efficiency **(*Numerical)**	
3	**Transmission Line Parameters:** Resistance of transmission line, skin effect, proximity effect Definition of inductance, Internal and external flux linkage of single conductor, inductance of single phase two wire line, composite and bundled conductor, inductance of three phase line with symmetrical and unsymmetrical spacing, concept of GMR and GMD, necessity of transposition, inductance of three phase double circuit line with symmetrical and unsymmetrical spacing, inductance of bundle conductor Capacitance of transmission line, capacitance of single phase line, capacitance of three phase line with symmetrical and unsymmetrical spacing, effect of earth on transmission line capacitance **(*Numerical)**	12
4	**Representation of power system components:** Introduction, single phase solution of balanced three phase networks, One-Line diagram and Impedance or reactance diagram, Per Unit(P.U.)system, advantage of Per Unit system ,p.u. impedance diagram, representation of load **(*Numerical)**	03
5	**Performance of Transmission Line:** Classification and modelling of short, medium and long lines, regulation and efficiency of short and medium lines, Ferranti effect, evaluation and estimation of generalized circuit constant(ABCD) for short and medium lines, surge impedance loading, tuned power line, Power circle diagram **(*Numerical)**	07
6	**Underground Cable and Power System Earthing:** **Underground Cable:** Classification and construction of cable ,insulation resistance of cable, capacitance of single core and three core cable, grading of cable, intersheath grading, capacitance grading **Power system Earthing:** Earthing definition, soil resistivity, step and touch potentials, measurement of earth resistance, soil resistivity, neutral grounding and its methods.	05

Note: *Numerical should be covered in Tutorials.

		Internal Assessment			End Sem. Exam	Exam Duration (Hrs)		
		Test 1	Test 2	Avg				
EEC403	Electrical Machine-II	20	20	20	80	3	-	100

Course Objectives	• To impart the knowledge of working principle, operations, performance and applications of single phase and three phase Transformers. • To understand the design of transformer with its cooling system. • To understand the performance parameters of transformers
Course Outcomes	Students will be able • To illustrate the working principle of single phase and three phase transformer • To illustrate the working principle of auto-transformer • To analyse various type of connections of three phase transformer. • To analyse performance of transformer under various operating conditions • To illustrate various design aspects of transformer. • To analyse the characteristics of CT and VT.

Module	Contents	Hours
1	**Single phase Transformer :-** Review of EMF equation, Equivalent Circuit, Phasor diagram, voltage regulation, Losses and Efficiency. Condition for Maximum Efficiency, All day Efficiency, Separation of Hysteresis and Eddy current losses. Parallel Operation: No load Operation, On load Operation: - Equal Voltage Operation and Unequal Voltage Operation, Testing of Transformer: - Polarity Test, OC and SC test, Sumpner's Test, Impulse test	10
2	**Autotransformer:-** Working, Advantages of Autotransformer over Two winding Transformer, Disadvantages. Introduction to High Frequency Transformer, Pulse Transformer, Isolation Transformer and its applications.	04
3	**Three Phase Transformers-** Construction and parts of transformer (design approach), Three phase transformer connections and phasor	10

	groups. Parallel operation, Excitation Phenomenon in transformers, Harmonics in three phase transformers, Suppression of harmonics, Oscillating neutral phenomenon, Switching in transient phenomenon, Open delta or V- connection, Three phase to two phase conversion (Scott connection).	
4	**Introduction to machine design**, Magnetic, Electrical, Conducting and Insulating materials used in machines. **Design of Single phase and Three phase transformers:-** Output equation, Main Dimensions, Specific electric and magnetic loadings, Design of core, Selection of the type of winding, Design of LV and HV windings, Design of insulation.	12
5	**Performance measurement of Transformers** Resistance and leakage reactance of the winding, Mechanical forces, No load current; Cooling of transformers – design of cooling tank and tubes. Relevant IS standards.	08
6	**Current Transformers** - Introduction, Terms and Definitions, Accuracy class, Burden on CT, Vector diagram of CT **Voltage Transformers** - Introduction, Theory of VT, Specifications for VT, Terms & definitions, Accuracy classes & uses, Burdens on VT, Connection of VTs	04

EEC404	Electromagnetic Fields and Waves	20	20	20	80	03	25	125

Course Objectives	• To impart the knowledge of electro-physics. • Expose students Electric and magnetic field and their application in electrical engineering
Course Outcomes	Students will be able • To apply knowledge of mathematics and physics in electrical engineering field. • To analyse electrostatic and static magnetic fields. • To analyse the effect of material medium on electric and magnetic fields. • To analyse and formulate time varying electric and magnetic fields. • To analyse wave generation and its propagation in different media. • To analyse static magnetic field and electrostatic field distribution using software tool.

Module	Contents	Hours
1	**Vector Basics**: Concept of Scalar and Vector, Co-ordinate System: Rectangular, Cylindrical and Spherical Co-ordinate System, Co-ordinate and vector transformation, (Numerical on line, Surface and Volume Integrals)	04
2	**Static Electric Fields:** Coulomb's Law in Vector Form, Electric Field Intensity, Definition, Principle of Superposition, Electric Field due to point charges, Electric Field due to line charge (one and two conductor transmission lines), Electric Field due to an infinite uniformly charged sheet, Definition and physical interpretation of gradient, Electric scalar potential, Relationship	08

	between potential and electric field and its application on Surface voltage gradient on conductor, Potential due to electrical dipole and flux lines, Electric Flux Density, Gauss Law, Definition and physical Significance of Divergence, Divergence theorem	
3	**Static Magnetic Fields:** The Biot-Savart's Law in vector form, Magnetic Field intensity due to a finite and infinite wire carrying a current I, Magnetic field intensity on the axis of a circular loop carrying a current I, Ampere's circuital law and its application on A solid cylindrical conductor and Infinitely long co-axial transmission line, Magnetic flux density, Definition and physical Interpretation of Curl, The Lorentz force equation for a moving charge and its applications on Force on a wire carrying a current I placed in a magnetic field, Torque on a loop carrying a current I, Magnetic moment, Magnetic Vector Potential.	08
4	**Electric and Magnetic Fields in Materials**: Poisson's and Laplace's equation and its application on Estimation and control of electric stress, control of stress at an electrode edge, Electric Polarization, Definition of Capacitance, Capacitance of two parallel plate, Co-axial, Spherical and Capacitance of two conductor of a single phase line, Electrostatic energy and energy density, Boundary conditions for electric and magnetic field, Electric current, Current density, Point form of ohm's law, Continuity equation for current, Definition of Inductance, Inductance of loops and solenoids, Flux linkage within and outside the conductor producing the flux, Energy density in magnetic fields.	08
5	**Time varying Electric and Magnetic Fields:** Faraday's law, Maxwell's Second Equation in integral form from Faraday's Law, Equation expressed in point form, Displacement current, Ampere's circuital law in integral form, Modified form of Ampere's circuital law as Maxwell's first equation in integral form, Equation expressed in point form, Maxwell's four equations in integral form and differential form.	04
6	**Wave theory:** Derivation of Wave Equation, Uniform Plane Waves, Maxwell's equation in phasor form, Wave equation in phasor form, Plane waves in free space and in a homogenous material, Wave equation for a conducting medium, Plane waves in lossy dielectrics, Propagation in good conductors, Skin effect.	04

Assessment:

Internal Assessment consists of two tests out of which; one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

Term work:

Term work consists of minimum eight tutorials (at least one on each module) and assignments (min. 2). The distribution of the term work shall be as follows:

Tutorials :15 marks
Assignments :05 marks
Attendance (Theory and Tutorial) :05 marks

The final certification and acceptance of term-work ensures the minimum passing in the term-work.

Theory Examination:

1. Question paper will comprise of 6 questions, each carrying 20 marks.
2. Total four questions need to be solved.
3: Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 5 marks will be asked.
4: Remaining question will be randomly selected from all the modules.

University of Mumbai						
Course Code	**Course Name**	**Teaching Scheme (Contact Hours)**		**Credits Assigned**		
		Theory	**Tutorial**	**Theory**	**Tutorial**	**Total**
EEC405	**Analog and Digital Integrated Circuits (abbreviated as ADIC)**	**3**	**-**	**3**	**-**	**3**

Course Code	Course Name	Examination Scheme						
		Theory					Term Work	Total
		Internal Assessment			End Sem. Exam	Exam. Duration (in Hrs)		
		Test 1	Test 2	Avg				
EEC405	Analog and Digital Integrated Circuits	20	20	20	80	3	-	100

Course Objectives	• To introduce the basic building blocks, theory and applications of linear integrated circuits. • To develop ability among students for problem formulation, system design and solving skills
Course Outcomes	Students will be able • To illustrate various performance parameters and characteristics of operational amplifier. • To illustrate various linear and non-linear application of operational amplifiers. • To design and analyse linear voltage regulators and multivibrators. • To do various conversion of number systems and illustrate logic families. • To build, design and analyse combinational circuits. • To build, design and analyse sequential circuits.

Module	Contents	Hours
1	**Operational Amplifiers: Fundamentals** Introduction to Differential amplifier, Block diagram of Op-amp Basics of an Op-amp, Op-amp parameters, Frequency response	03
2	**Application of Operational Amplifiers** Voltage follower, design of inverting and non- inverting amp, adder, subtractor, integrator and differentiator, V to I and I to V converter, Schmitt trigger, sample and hold circuits, active filters: first order LPF, Instrumentation amplifier (3 Op-amp) with applications, Optical isolation amplifier	08

3	**Linear Voltage Regulators –** IC -78xx, 79xx, LM 317. Design of adjustable voltage source using IC- LM317, Low Dropout (LDO) voltage regulator **IC-555-** Functional block diagram, Applications of IC 555, Design of Multivibrator (Monostable and Astable)	06
4	**Logic families -** Review of Number formats: Binary, hexadecimal, BCD and their basic math operations (addition and subtraction) Introduction to Logic gates and Boolean Algebra. Specifications of Digital IC, Logic Families: TTL,CMOS logic families, Comparison of TTL and CMOS, Interfacing of TTL and CMOS	06
5	**Combinational Logic Circuit -** K-Maps and their use in specifying Boolean expressions upto 4 variables, Minterm, Maxterm, SOP and POS implementation Implementing logic function using universal gates, Binary Arithmetic circuits: Adders, Subtractors (Half and Full), Multiplier, 2 bit comparators, Designing code converter circuit - binary to gray, Gray to Binary, Multiplexer (ULM), De- multiplexers.	08
6	**Sequential Logic Circuits -** Comparison of combinational & sequential circuit **Flip-flops -** SR, T, D, JK, Master Slave JK, Converting one flip-flop to another, Use of debounce switch **Counters-** Modulus of counter, Design of Synchronous, Asynchronous counters, Ripple counters, Up/Down Counter, Ring counter, **Shift Registers –** Right and left shift registers	05

		Internal Assessment			End Sem. Exam	Exam Duration (Hrs)		
		Test 1	Test 2	Avg				
EEC406	Electrical Network	20	20	20	80	3	25	125

Course Objectives	• To impart the knowledge of various fundamental techniques for analysis of electrical network from application point of view. • To mold creative engineers needed in education and industrial development along with problem solving skills.
Course Outcomes	Students are able • To analyze electrical network using different Network theorems. • To analyze electrical network using Graph theory. • To analyze the effect of switching conditions on Electrical networks using Differential equations. • To analyze the effect of switching conditions on Electrical networks using Laplace Transform. • To develop transfer function model of system using two port network parameters. • To analyze time domain behavior from pole zero plot

Module	Contents	Hours
1	**Solution of Network:** **with DC Dependent Sources:** Mesh analysis, Super mesh analysis, Nodal analysis, Super node analysis, Source transformation and Source shifting. Superposition theorem, Thevenin's theorems and Norton's theorem and Maximum power transfer theorem. **with AC Sources:** Magnetic coupling, Mesh analysis, Nodal analysis, Superposition theorem, Thevenin's theorems, Norton's theorem, Maximum power transfer theorem and Reciprocity theorem	10
2	**Graph Theory and Network Topology:** Introduction, Graph of network, Tree, Co-tree, Loop incidence matrix,	05

	Cut set matrix, Tie set matrix and Loop current matrix, Number of possible tree of a graph, Analysis of network equilibrium equation and Principle of duality.	
3	**First Order and Second Order Differential Equations:** Behaviors of network elements under switching condition and their representation, Solution of initial and final condition in RL, RC and RLC networks for AC and DC sources.	05
4	**The Laplace Transform:** The Laplace transform and its application to network analysis, transient and steady state response to step, ramp and impulse signals.	05
5	**Two port parameters:** Open circuit, short circuit, transmission and hybrid Parameters, relationships between parameter sets, reciprocity and symmetry conditions, parallel connection of two port networks	05
6	**Network Functions; Poles and Zeros:** Network functions for one port and two port networks, Driving point and transfer functions, ladder network, General network, poles and zeros of network functions, restrictions on Pole and zero locations for driving point functions and Transfer functions, time domain behavior from pole - zero plot.	06

Note: Numerical should be covered in Tutorials.

EEL401	Simulation Lab-I	-	-	-	-	25	-	25	50

Course Objectives	• To understand basic block sets of different simulation platform used in electrical system design. • To understand coding in different programming software's used in electrical system design
Course Outcomes	Students are able • To simulates electrical circuits for their performance analysis. • To develop algorithms for electrical circuits for their performance analysis. • To simulates electronic circuits for their performance analysis. • To develop algorithms for electronic circuits for their performance analysis.

Suggested List of Laboratory Experiment:

1. Introduction to basic block sets of simulation platform.
2. Simulation of single phase bridge rectifier without filter
3. Simulation of single phase bridge rectifier with filter
4. Simulation of UJT as a relaxation oscillator
5. Algorithm on matrix operations
6. Simulation for OC and SC test of single phase transformer
7. Simulation of transmission line model
8. Algorithms to determine transmission line performance and parameters
9. Algorithm for generation of standard test signals
10. Simulation of differential equations
11. Simulation to verify different network theorems with dependent and independent sources
12. Simulation of DC motor performance characteristics
13. Simulation / Algorithms to draw the pole zero plot of electrical network
14. Simulation / Algorithms to draw the response of electrical network for standard test signals.

Any other simulations / algorithms based on third and fourth semester syllabus, which will help students to understand topic / concept.

Term work:

Term work consists of minimum 8 simulation / algorithms (at least one on each domain). The distribution of the term work shall be as follows:

Simulation / Algorithm :20 marks

Attendance :05 marks

The final certification and acceptance of term-work ensures the minimum passing in the term-work.

Practical/Oral Examination:

Practical/Oral examination will be based on entire syllabus.

EEL402	Electrical Machine Lab - II	-	-	-	-	25	25	-	50

Course Objectives	• To impart the knowledge of working principle, operations, performance and applications of single phase and three phase Transformers. • To understand the performance parameters of transformers
Course Outcomes	Students will be able • To demonstrate the working principle of single phase and three phase transformer • To demonstrate the working principle of auto-transformer • To analyse various type of connections of three phase transformer. • To analyse performance of transformer under various operating conditions • To analyse the characteristics of CT and VT.

Syllabus: Same as that of Course EEC403 Electrical Machine - II

Suggested List of Laboratory Experiment:

1. O.C & S.C. Test on 1Φ Transformer
2. Sumpner's Test on 1Φ Transformer
3. Separation of iron loss into hysteresis and eddy current loss components in a1Φ Transformer
4. Load Test on 1Φ Transformer
5. Open circuit & Short circuit test on three phase transformer
6. Parallel operation of transformers
7. Scott connection of transformer
8. Open Delta connection of transformer

Any other experiment based on syllabus which will help students to understand topic/concept.

Term work:

Term work shall consist of minimum 6 experiments. The distribution of marks shall be as follows:

Experiments Performance	:10 marks
Journal	:10 marks
Attendance (Theory and Practical)	:05 marks

The final certification and acceptance of term work ensures the minimum passing in the term work.

Practical/Oral Examination:

Practical/Oral examination will be based on entire syllabus.

University of Mumbai

EEL403	Electronics Lab-II	-	-	-	-	25	25	-	50

Course Objectives	• To introduce the basic building blocks, theory and applications of linear integrated circuits. • To develop ability among students for problem formulation, system design and solving skills
Course Outcomes	Students will be able • To demonstrate various performance parameters and characteristics of operational amplifier. • To demonstrate various linear and non-linear application of operational amplifiers. • To build, design, and analyse linear voltage regulators and multi vibrators.. • To build, design and analyse combinational circuits. • To build, design and analyse sequential circuits.

Syllabus: Same as that of Course EEC405 Analog and Digital Integrated Circuits.

Suggested List of Laboratory Experiments:

1. Linear applications of op-amp
2. Non linear applications of op-amp
3. Active filters
4. Design and implementation of variable voltage regulator using IC 317
5. Design and implementation of astable multivibrator
6. Design and implementation of monostable multivibrator
7. Design and implementation of VCO.
8. Implementing a Binary to Gray, gray to binary or Binary to XS3 code converter using gate ICs.
9. Constructing flip-flops like SR, D, JK and T using all NAND gates and a debounce

switch.

10. Designing a mod N counter where N <14 using J K flip-flops and D flip-flops.
11. Design of a ripple counter
12. Design two bit comparator using gate ICs.
13. Building of a ring counter and twisted ring counter using D flip-flop ICs.
14. Any one of the following
    (i) Full Adder using Gates and using Decoder or a Multiplexer.
    (ii) Using a shift register as a sequence generator.

Any other experiment based on syllabus which will help students to understand topic/concept.

Term work:

Term work shall consist of minimum 10 experiments. The distribution of marks for term work shall be as follows:

Experiments Performance :10 marks
Journal :10 marks
Attendance (Theory and Practical) :05 marks

The final certification and acceptance of term work ensures the minimum passing in the term work.

Practical/Oral Examination:

Practical/Oral examination will be based on entire syllabus.

		Internal Assessment			End Sem. Exam	Term Work	Pract. and Oral	Oral	
		Test 1	Test 2	Avg					
EEL404	Electrical Workshop	-	-	-	-	25	-	25	50

Course Objectives	• To introduce the basic laboratory instruments used for measurement purpose. • To develop the ability to handle electrical equipment.
Course Outcomes	Students will be able • To demonstrate various electrical and electronic measuring equipment's. • To identify various electrical and power electronic components. • To repair and do maintenance of households appliances. • To identify and use different low voltage protective switchgears. • To identify and use different wiring accessories and tools.

Syllabus:-

Module	Contents	Hours
1	**Introduction of lab equipment's and electrical elements:** Introduction to different equipment in the lab (multi-meter, CRO, DSO, power supplies, function generators); Resistors, presets, potentiometers, inductors (iron core and ferrite core), capacitors of different ratings. Electromagnetic Relays, MOVs,	03
2	**Introduction to different electronic components:** different ratings, packages, terminals, sizes and shapes, testing methods of diodes (rectifier, ultrafast, schotkey, power, zener, LED), transistors(BJT), SCRs, GTOs, MOSFETs, IGBTs, DIACs, TRIACs, intelligent power modules (IPM) (Minimum Three) Different PCB connectors, Terminal, Terminal Blocks; Transformers used for electronic circuits (pulse, high frequency)	03

3	**Commonly used ICs:** Data sheet reading of commonly used ICs (buffers,opto-couplers, gate drivers, PWM ICs, Real time clock ICs, PLL ICs, seven segment display and driver) (Minimum Three)	04
4	**Hardware implementation of Electronics circuits:** Soldering techniques and equipments, PCB Layout (artwork) design using software and Fabrication ~~itching~~ process. Testing and debugging process of assembled circuits	06
5	**Residential/ Industrial Wiring:** Wiring materials, selection of wire, different switching and protection devices (MCBs/ Fuses/Relays), Cables and cable management Estimation and costing of residential wiring (Simple numerical on wiring of single room), connection of energy meter and distribution board, wiring standards (IS-732, section 4)	04
6	**Repair of house hold appliances and machines:** Testing, fault finding, Dismantling, assembling and testing after repairs of house hold appliances like fan and regulator, heater, geyser, mixer, **washing machine**, microwave oven etc.(minimum Two) Troubleshooting charts for 1 ph and 3ph transformers and motors (Minimum one transformer and one motor)	04

Books Recommended:

3. Allasappan & Ekambarm Estimating design & costing
4. S L Uppal Estimating & costing
5. Surjit Singh Electrical Estimating & costing
6. K B. Bhatia: Electrical Appliances

Suggested List of Laboratory Experiments:

1. Study of different symbols and tools used in Electrical Engineering
2. Identify values of different resistors and capacitor using color code and DMM
3. Identify different types of cables/wires, switches and their uses.
4. Identify different types of fuses & fuse carriers, MCB and ELCB, MCCB with ratings and usage.
5. Wiring of simple light circuit for controlling light/fan point (PVC conduit wiring and wiring accessories)
6. Wiring of fluorescent lamps and light sockets (6 A).
7. Wiring of Power circuit for controlling power device (16A socket)
8. Design of Staircase wiring / Go-down wiring / Tunnel wiring

9. Demonstration and measurement of power/energy consumption and repair maintenance of electric iron/mixer grinder/ washing machine/refrigerator/ air conditioner/water heater/geyser/single phase pump/exhaust fan.
10. Verifying the fusing time of rewireable fuses.
11. To identify terminology of various semiconductor devices.

Any other experiment based on syllabus which will help students to understand topic/concept.

Term Work:
Term work shall consist of minimum 8 experiments. The distribution of marks for term work shall be as follows:
Laboratory Performance : 10 marks
Journal : 10 marks
Attendance : 05 marks
The final certification and acceptance of term work ensures the minimum passing in the term work.

Oral Examination:
Oral examination will be based on entire syllabus.
